SKILLS

- **Languages:** TypeScript, JavaScript, Python, Java, C#
- **Frontend:** React, Redux, TanStack Query (React Query), Tailwind CSS, HTML, CSS
- **Backend & Databases:** Node.js, Express, MongoDB, REST APIs, WebSockets, Object-Oriented Programming
- **AI Tools:** Claude Code, Cursor
- **Tools & Workflow:** Git, Jira, Vite, Postman, Agile/Scrum, Docker

EDUCATION

Practical Software Engineering
ORT Hermelin, Netanya, Israel
Graduated May 2023

LANGUAGES

- Hebrew | Native
- English | Native

SUMMARY

Software Engineer with 3 years of experience specializing in modern frontend architectures, such as **React** and **TypeScript**, backed by robust backend capabilities. Highly skilled in crafting intuitive, high-performance user interfaces and managing complex state, supported by a solid foundation in building **RESTful APIs** and data services with **Node.js**, **Express**, **Python**, and **MongoDB**.

EXPERIENCE

SOFTWARE ENGINEER
8200 Intelligence Unit | Jun 2023 - Aug 2026 | Ramat Hasharon

- Enhanced application speed and user experience by implementing modern **React** practices, robust state management, such as **Redux** and **TanStack Query**, and streamlined **Tailwind CSS** assets.
- Engineered secure **RESTful APIs** using **Node.js**, **Express**, and **Python** to streamline data processing and integration with **MongoDB** databases.
- Used AI tools, such as **Claude Code** and **Cursor**, to accelerate implementation, then reviewed, tested, and adapted generated code to fit project standards and production requirements.
- Managed the full development lifecycle in an **Agile**, **Scrum** environment, using **Git**, **Jira**, and **Postman** for version control, sprint tracking, and API testing, consistently driving on-time deployments.

RF COMPONENT TEST AUTOMATION PROJECT
8200 Intelligence Unit | React, TypeScript, Python, MongoDB

- Built the **React** and **TypeScript** interface for an automated RF test bench whose **Python** backend drives a spectrum analyzer and signal generator over **SCPI**, replacing a manual check repeated up to 100 times a day.
- Designed the results view rendering the ~8 measurements per component as interactive graphs, backed by a **MongoDB** history for comparing a component's behavior across past runs by date.
- Cut testing from 5-30 minutes of manual work per component to 30 seconds-5 minutes, and gave every technician one uniform standard.

COURSE COMMANDER – "OMEGA" TRAINING PROGRAM
8200 Intelligence Unit | May 2025 - Oct 2025 | Interim Rotation

- Led and mentored trainees through an intensive professional software course, focusing on development, **DevOps**, and **SRE**.
- Commanded technical training sessions, providing guidance on coding standards and system architecture.
